## DETAILED ACTION

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4 are rejected as being anticipated by Wilkinson (US 5,659,365).

Regarding claim 1, Wilkinson discloses recording medium having recorded thereon information of images which have been coded by performing motion compensation (Wilkinson, col. 2, lines 65-67 thru col. 3 lines 1-5, shows recording medium having recorded [video file] thereon information of images which have been coded by performing motion compensation.),

information includes rounding method information specifying a positive or a negative rounding method for interpolation intensity values of pixels in performing the motion compensation (Wilkinson, Fig. 2A, col. 4, lines 56-66, shows information positive [up] or a negative [down] rounding method for interpolation intensity values of pixels in performing the motion compensation).

Regarding claim 2 Wilkinson the rounding information consist of one bit (Wilkinson, Fig. 2A, col. 4, lines 60-63 "adding one extra bit to each luminance vector").

Regarding claim 3 Wilkinson information specifies positive rounding method when one bit has first logical value and specifies negative rounding method when one bit has second logical value (Wilkinson, col. 4, lines 60-66 shows information specifies positive rounding method when one bit has first logical value and specifies negative rounding method when one bit has second logical value)

Regarding claim 4, Wilkinson discloses rounding method information specifies one of two values, one of two values specifies positive rounding method (Wilkinson, col. 4, lines 60-66 shows rounding method information specifies one of two values, one of two values specifies positive rounding method or negative rounding method which extra bit to each luminance vector zero or one).

### **Claim Rejections - 35 USC § 101**

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-4 are rejected under 35 USC 101.

Regarding claim 1, claim in lines 1-2 recites "A recording medium having recorded thereon information of images which have been coded by performing motion compensation". Claiming a recording medium having recorded thereon information of images is non-statutory. Claim 2-4 are dependent on rejected claim 1 therefore they are also rejected.
